1.2 Concept

The living situation is the physical environment in which the patient normally lives, sleeps, keeps their clothing, etc.

1.3 Mindmap

1.4 Purpose

The goal is to take stock of the patient’s current living situation. This is in regard to any current or future problems the patient encounters or could encounter when living with the disease and the patient’s (future) constraints.

There are many reasons to ask about the patient’s living situation. The living situation can be relevant in the patient’s wish to live in their own home independently in the event of disease and/or disability (WMO, 2011; CIZ, 2011). Furthermore, the living situation is important in evaluating the risks of falling, particularly among people living alone (CMO, guidelines for fall prevention, 2004).
