1.2 Concept

A treatment instruction includes an agreed constraint in the treatment based on the oral or written living will of the patient.

1.3 Mindmap

1.4 Purpose

A good overview of treatment instructions based on the wishes of the patient or their authorized representative on (un)desired treatments is important in a patient's care. A concise, orderly list is of

particular importance in acute care situations. Due to the large variety of symptoms, the situation concerns not only a CPR setting, but also cases in which the patient's condition rapidly worsens as a result of existing symptoms.

A healthcare provider consulting this information can discuss these existing treatment instructions with the patient, the patient's family or the patient's authorized representative and possibly include the instructions in their policy.

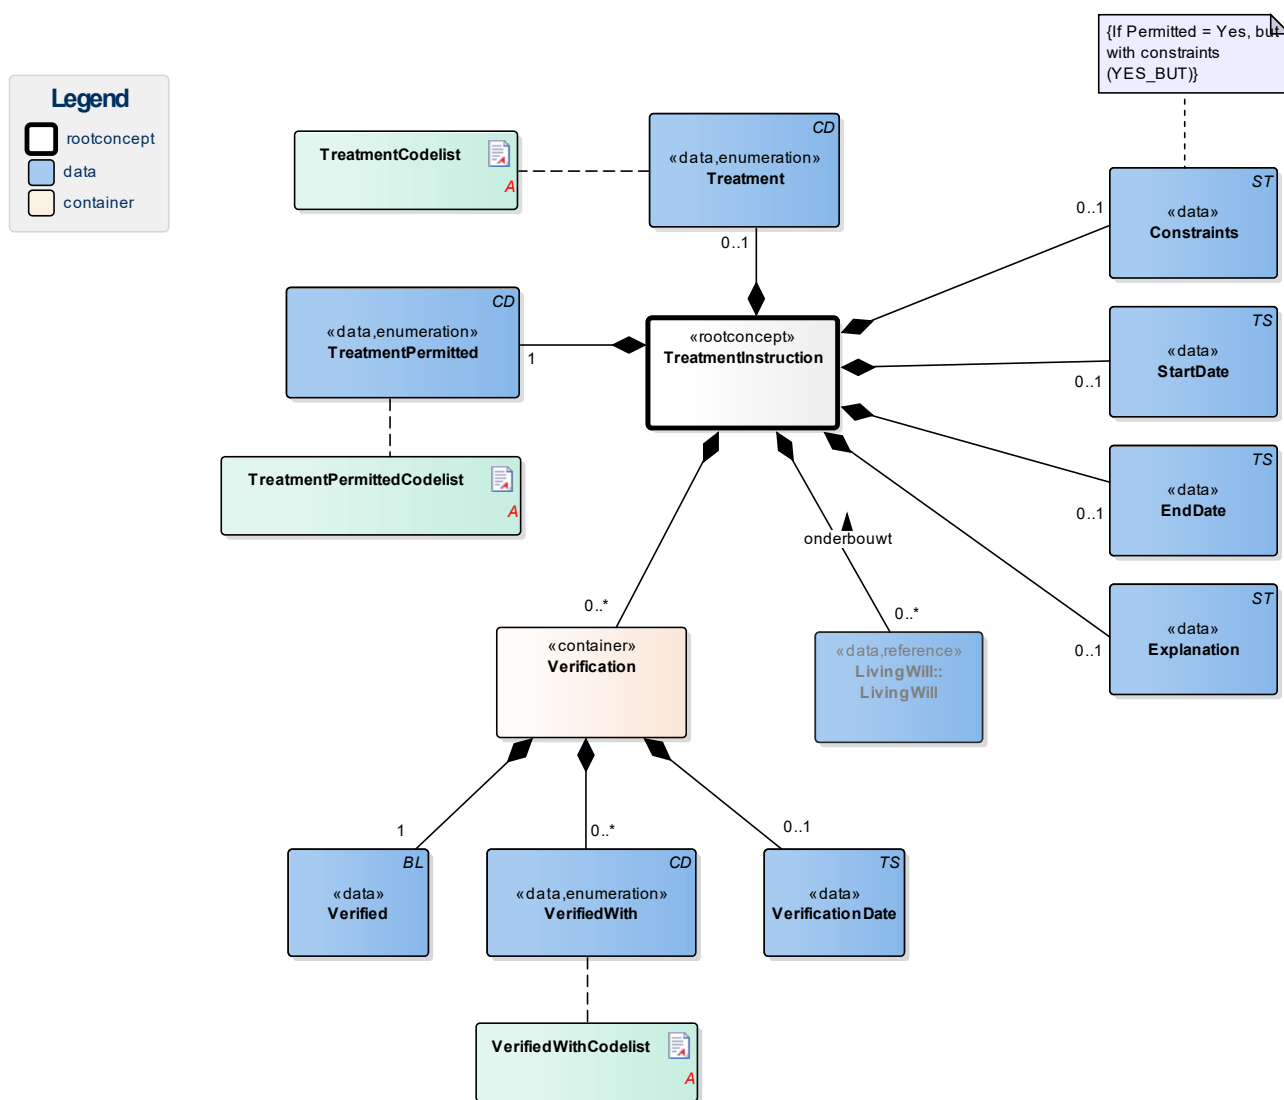

1.5 Patient Population

1.6 Evidence Base

Explanation for TreatmentCodeList:

In discussions on constraints in the therapeutic treatment of patients with a chronic neurological or respiratory condition, respiration is sometimes included as a separate restriction. The 'Respiration' item is to be seen separately from the decisions on CPR.
