1.2 Concept

The concept Procedure describes therapeutic or diagnostic procedure undergone by the patient or which the patient will undergo. The concept can describe in the right context historical, future as well as advised procedures.

A procedure can be a simple blood pressure measurement, but also a complex heart surgery. In some care settings, the term treatment is used instead of the term procedure.

1.3 Mindmap

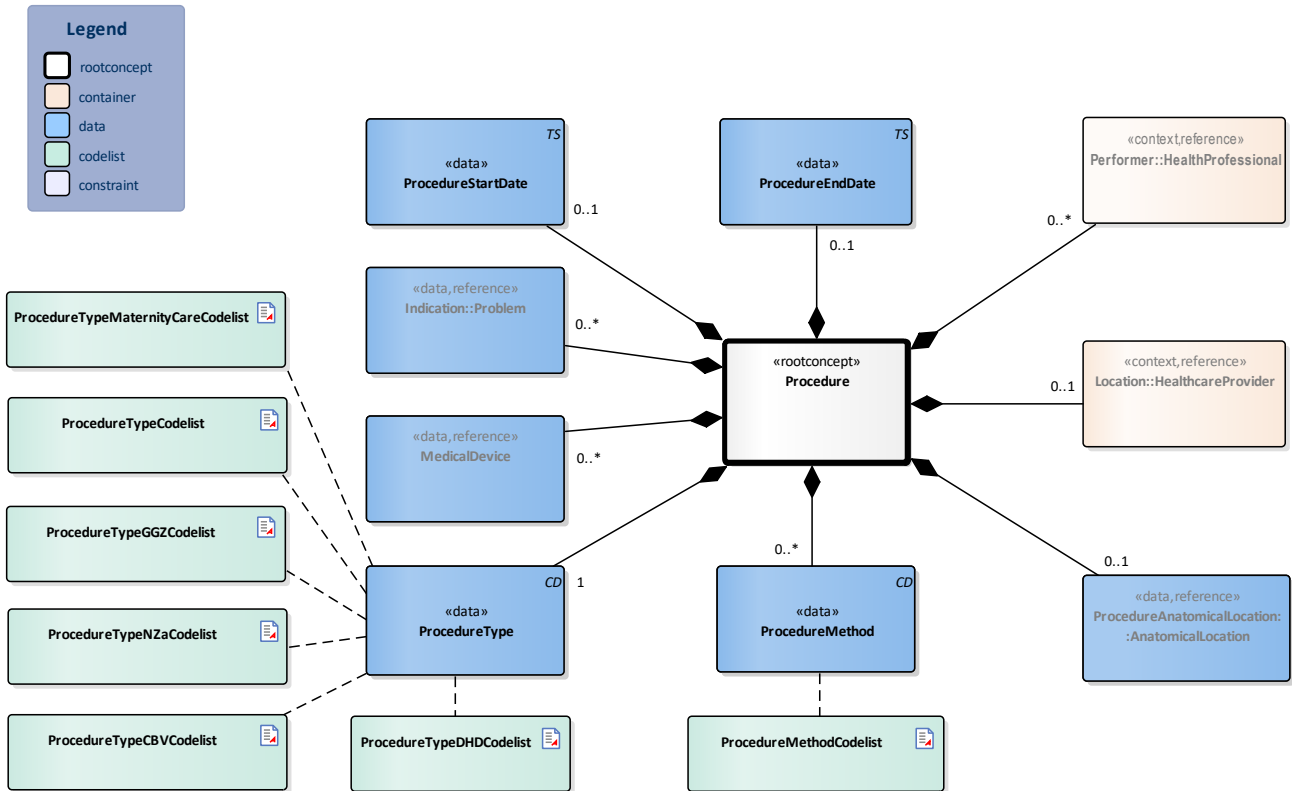

1.4 Purpose

A procedure is carried out or planned as part of a planned policy or to obtain additional information in the diagnostic process. Procedures are documented to gain insight into the treatment of a patient. In addition, procedures are documented for administrative purposes such as invoicing and workload measurement, scientific research and/or education.
