1.2 Concept

The functional or mental status provides insight into the patient’s functional and mental limitations.

1.3 Mindmap

1.4 Purpose

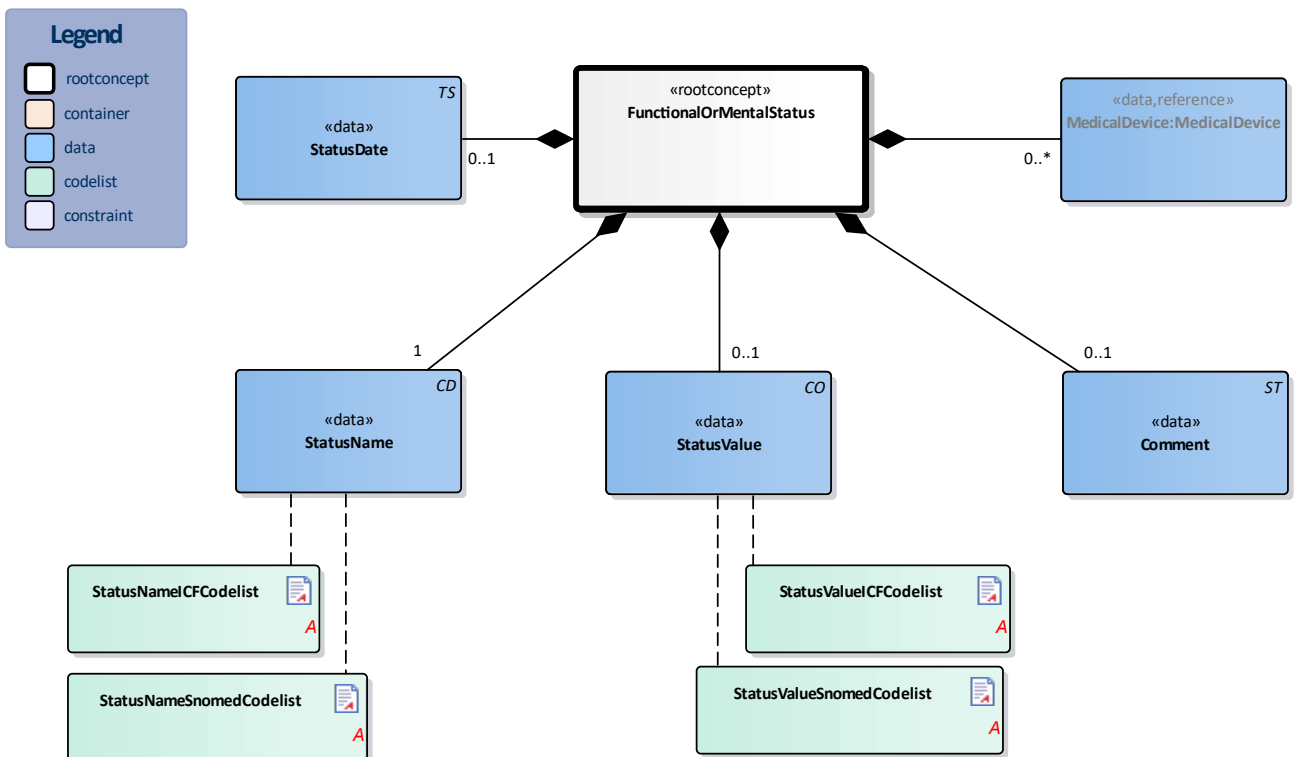

The patient’s functional and mental status can be recorded to provide insight into the patient’s limitations which need to be taken into account for further treatment and care and in order to evaluate the effects of a treatment.

Diagnoses with (the potential for) functional limitations are not to be recorded here. To record these, please use the Problem information model.

«data»	StatusValue	
Definitie	The extent to which the patient is limited by the functional or mental condition. If both the status name and the status value are recorded in code, then both values must come from the same code system. If the patient uses a medical device, the evaluation of the extent of the limitation will take place without this aid. The answer codes must be selected from the subselection of the code system corresponding with the request in accordance with the rules applicable to that system.
