1.1 Revision History

Publicatieversie 1.0 (04-09-2017)

Publicatieversie <u>1.1</u> (06-07-2019) Bevat: ZIB-718.

Publicatieversie <u>1.2</u> (31-01-2020) Bevat: ZIB-929.

1.2 Concept

The Short Nutritional Assessment Questionnaire 65+ (SNAQ65+) is a (validated) measuring tool for determining the extent of a patient's malnutrition. The tool comprises a number of questions, each of which is assigned a score. The total score determines the extent of malnutrition.

The SNAQ helps to recognize and treat malnutrition at an early stage.

Three varieties of the measuring tool were developed for different care settings: hospitals (adults and children), nursing and retirement homes and independently living seniors. This concept describes the tool intended for the setting of independently living elderly.

1.3 Mindmap

1.4 Purpose

The SNAQ65+ score is used to determine the extent of malnutrition or the risk of malnutrition. To treat malnutrition quickly and effectively, it is important to identify the malnutrition at an early stage.

1.5 Patient Population

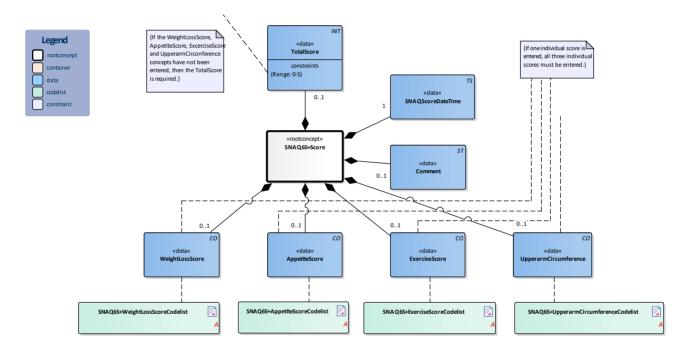

The SNAQ is meant for patients over 65 years of age who are living independently in their own environment

1.6 Evidence Base

To determine the extent of malnutrition, SNAQ has a number of tools, validated for different settings:

- The SNAQ was developed foe adults admitted to hospital
- The SNAQ65+ was developed for the group of seniors (> over 65) who live at home and who may make use of care at home.
- The SNAQrc (Short Nutritional Assessment Questionnaire for Residential Care) is available for screening for malnutrition in nursing and retirement homes.
- The STRONGkids tool is available for screening for malnutrition among children.

1.7 Information Model

«rootconcept»	SNAQ65+Score	
Definitie	Root concept of the SNAQ65+Score information model. This root concept contains all data elements of the SNAQ65+Score information model.
