1.2 Concept

A person who receives medical, psychological, paramedical or nursing care. In some care settings, the term client or participant is used instead of the term patient.

1.3 Mindmap

1.4 Purpose

Recording relevant information to identify the patient for administrative purposes and process support.

1.5 Patient Population

1.6 Evidence Base

Although the term Patient is not used in all care settings, it has been decided not to change the name of the zib to Person as the overall name for Patient, Client, Participant, etc. because the concept Person is broader than the concept referred to here. Healthprofessionals and contact persons are ultimately also Persons. The name and address information is based on the information set of the Municipal Personal Records Database (GBA) and on the Dutch Implementation Guide: HL7v3 Basic Components.

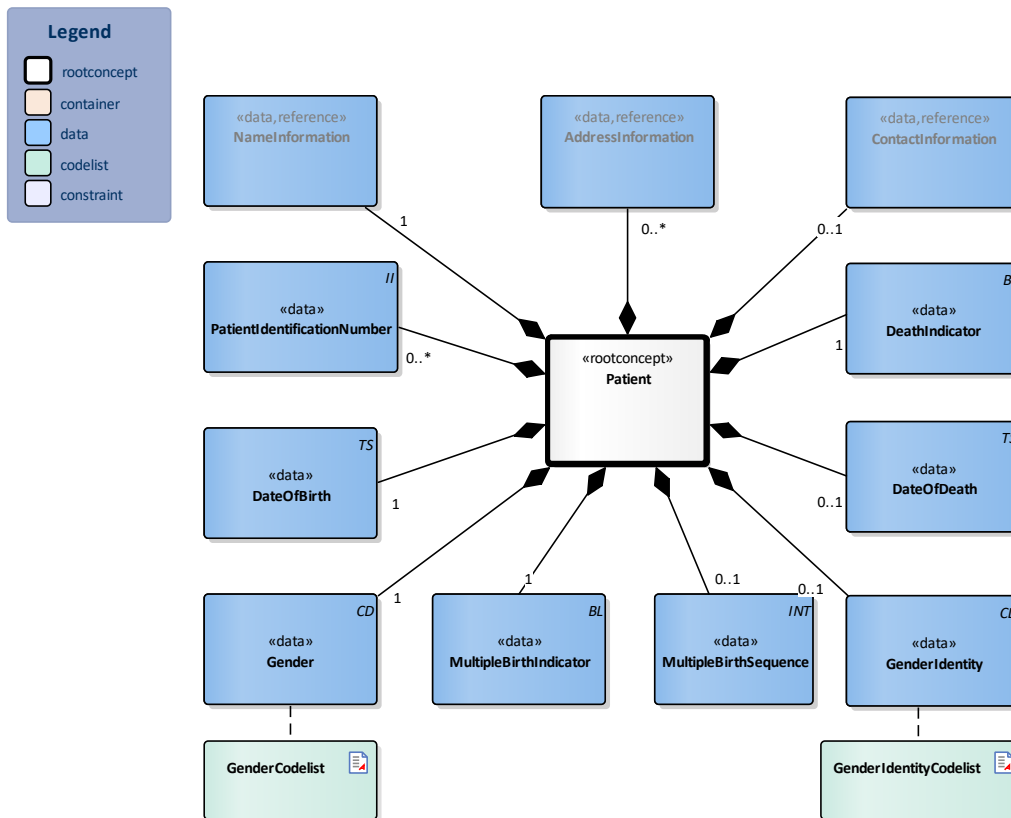

The information for the legally required verification of a social security number provided by the SBV-Z also follows GBA specifications.

Furthermore, the AZR (AWBZ-wide healthcare registration) data set used in AWBZ healthcare served as a base in determining the set.

Use of patient and personal details must follow the Personal Data Protection Act. This law prohibits processing non-essential personal data and mandates decent and reasonable processing of obtained personal data (Kohnstamm, 2006). Patient data recorded in (electronic) patient records or in digital messages must be handled in the context of the Personal Data Protection Act. Furthermore, healthcare centers must meet the Information Security NEN 7510 standard. Observance of the PDPA is monitored by the Dutch Data Protection Authority (CBP). The CBP and the Healthcare Inspectorate (IGZ) are jointly responsible for monitoring information security in healthcare (CBP, IGZ, 2008).

For those reasons, some personal data, seen in some countries as administrative data, are not included in this information model but in the information models for the Social Anamnesis.
